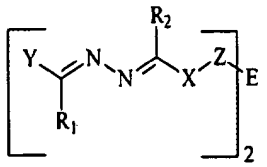
AMENDMENTS TO THE CLAIMS

A detailed listing of all claims that are, or were, in the present application, irrespective of whether the claim(s) remains under examination in the application are presented below. The claims are presented in ascending order and each includes one status identifier. Those claims not cancelled or withdrawn but amended by the current amendment utilize the following notations for amendment: 1. deleted matter is shown by strikethrough for six or more characters and double brackets for five or less characters; and 2. added matter is shown by underlining.

1. (Previously Presented) An organophotoreceptor comprising at least one photoconductive element comprising an electrically conductive substrate and a photoconductive element on the electrically conductive substrate, the photoconductive element comprising:

(a) a charge transport compound having the formula:



where R_1 and R_2 are, independently, hydrogen, an alkyl group, an alkaryl group or an aryl group; X is an aromatic group; Y is triphenyl amine or a heterocyclic (N,N-disubstituted)arylamine; Z is $(CH_2)_m$ group where m is an integer between 0 and 30 where one or more of the methylene groups is optionally replaced by O, S, C=O, O=C-O, O=C-NR_3, sulfoxide, sulfate, phosphate, an aryl group, urethane, urea, NR_4 group, CHR_5 group, or CR_6R_7 group where R_3, R_4, R_5, R_6, and R_7 are, independently, H, hydroxyl, thiol, an amine group, an alkyl group, an alkaryl group, a heterocyclic group, or an aryl group, and E is a bond, O, S, C=O, NR_8, CR_9R_{10} group, a hetrocyclic group, or an aromatic group where R_8, R_9, and R_{10} are, independently, H, an alkyl group, an alkaryl group, or an aryl group; and

(b) a charge generating compound.

2. (Previously Presented) An organophotoreceptor according to claim 1 wherein Y is a carbazole group or a julolidine group.
